Application/Control Number: 10/606,937 Page 2

Art Unit: 1742

1. The Examiner has carefully considered Applicant's Response of 1/3/06. The Examiner does not find Applicant's argument persuasive. In particular, the Examiner finds that the pending claim language does not preclude the addition of elements

outside of Applicant's claimed composition.

2. The text of those sections of Title 35, U.S. Code not included in this action can

be found in a prior Office action.

3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Prasad US Pat. 4,459,263 (Prasad '263) in view of Prasad et al. US 2002/0004018

(Prasad et al.) and DE 4123606 (DE'606)

Prasad '263 discloses at col. 2, lines 56-68 the invention substantially as claimed.

Prasad '263 discloses a cobalt alloy comprising:

20-30% Cr;

0-6.5 % Mo;

0-15% W;

0-1.5% Mn; and

remainder Co.

Prasad '263 is silent as to Si and Ta additions, and the amount of impurities including

nitrogen.

Art Unit: 1742

Prasad et al. teaches to add Si and Ta to Co alloys in the same field of endeavor to improve the corrosion resistance, to lower melting temperature and to strengthen the alloy.

Both Prasad '263 and Prasad et al. disclose compositional ranges that overlap those as claimed by Applicant establishing a prima facie case of obviousness. Prasad '263 further discloses at Table 2, composition 6, wherein the amount of W is 10% and the amount of Mo is 2%.

It would have been obvious to one having ordinary skill in the art to add Ta and Si as taught by Prasad et al. to the invention of Prasad '263 in order to improve corrosion resistance, lower melting temperature and to strengthen the alloy.

DE'606 teaches to add N in an amount above 0.15% in the same field of endeavor for the purpose of improving the repeated heating without deterioration of the alloy. It would have been obvious to one having ordinary skill to add N in an amount of above 0.15% in order to improve the repeated heating without deterioration of the alloy. It would be obvious to minimize the amount of impurities to less than 0.1% as known in the art to improve the performance of the alloy.

4. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prasad US Pat. 4,459,263 (Prasad '263) in view of Prasad et al. US 2002/0004018 (Prasad et al.) and DE 4123606 (DE'606), and further in view of Ingersoll et al. Prasad '263 in view of Prasad et al. and De'606 disclose the invention substantially as claimed (see paragraph 3 above).

Art Unit: 1742

However, Prasad '263 in view of Prasad et al. and De'606 do not disclose casting methods for forming the alloy into veneers and crowns.

Ingersoll et al. teaches that dental alloys can be cast in the same field of invention for the purpose of forming crowns and veneers.

It would have been obvious to one having ordinary skill in the art at the time of the invention to use a casting technique as taught by Ingersoll et al. in the invention of Prasad '263 in view of Prasad et al. and De'606 in order to form veneers and crowns.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Jenkins whose telephone number is 571-272-1242. The examiner can normally be reached on M-TH6:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on 571-272-1242. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
